™ Trademark of Tapuae Partnership, NZ Registered pursuant to the ACVM Act 1997,  
No. P7641 See [www.nzfsa.govt.nz/acvm](http://www.nzfsa.govt.nz/acvm) for registration conditions.

**FOR FULL DIRECTIONS OF USE SEE ATTACHED BOOKLET.  
SHAKE WELL BEFORE USE**

**ACTIVE INGREDIENT:** Contains 250g/litre LAMBDA-CYHALOTHRIN in the form of a capsule suspension.  
**APPROVED HANDLER:** This product must be under the control of an approved handler during use. See MSDS for full details.

**RECORD KEEPING:** Records of use must be kept under certain circumstances. See MSDS for full details

**WARNING:** This substance may be harmful if swallowed, inhaled or absorbed through the skin. May cause skin and eye irritation, avoid contact with the skin and eyes.

**DANGER:** May cause organ damage from repeated oral exposure at high doses.

**FIRST AID:** If swallowed DO NOT induce vomiting. For advice contact the National Poisons Centre 0800 POISON (0800 764 766) or a doctor immediately. If skin or hair contact occurs, remove contaminated clothing and flush skin and hair with running water. DO NOT scrub the skin. If splashed in eyes, wash out immediately with water for at least 15 minutes. If inhaled move the victim to fresh air immediately. Begin artificial respiration if breathing has stopped.

**PERSONAL PROTECTION:** Avoid contact with skin or inhalation of spray mist. Gloves should be worn at all times. Wear eye protection when handling the concentrate. Ensure adequate ventilation when handling the concentrate. Remove protective clothing and wash hands and face thoroughly before meals and after work. Wash protective clothing daily after work. DO NOT eat, drink or smoke while using this product.

**ECOTOXIC:** Very toxic to aquatic organisms. Avoid contamination of any water supply with chemical or empty container. Toxic to terrestrial vertebrates. Very toxic to terrestrial invertebrates.

**STORAGE:** Store in a cool dry place, avoiding temperatures above 35°C. Store in original container, tightly closed, away from foodstuffs. Keep out of reach of children.

**SHELF LIFE:** When stored appropriately, this product should show no significant degradation for 2 years from the date of manufacture. Contact your supplier for further information about the use of any product that is older than this.

**DISPOSAL:** Triple rinse the empty container and add residue to spray tank, then flatten and burn if circumstances, especially wind direction permit, otherwise bury in a suitable landfill.

**MATERIAL SAFETY DATA SHEET:** Additional information is listed in the MSDS available from Zelam Limited or [www.zelam.com](http://www.zelam.com).

**ERMA NEW ZEALAND:** Additional information is available from the ERMA NZ website - [www.ermanz.govt.nz](http://www.ermanz.govt.nz). Approval Code: HSR000336

**NOTICE TO BUYER:** The manufacturer and vendors of Cyhella™ warrant the formulation to contain the specified active ingredient within accepted tolerance but make no warranty of any kind on the uses of material and accept no responsibility, whether the material is used in accordance with the label directions or not.

**REGISTERED TO:** Tapuae Partnership, Hudson Rd, New Plymouth, NZ

BATCH NO:

D.O.M:

**PLEASE READ ENTIRE LABEL BEFORE MIXING OR USE. SHAKE WELL BEFORE USE**

**DIRECTIONS FOR USE:** The rates suggested are for high volume spraying to run-off. For concentrate spraying, adjust dilution rate accordingly.

SITUATION	PEST	RATES	CRITICAL COMMENTS
Beans	Tomato Fruitworm	40ml/ha in a minimum of 500L of water/ha	Apply when insects first appear and if necessary 2 to 3 weeks later.
Beans, Forage Brassicas, Maize, Onions, Tomatoes Sweetcorn & Vegetables.	Cutworm	40ml/ha in a minimum of 300L of water/ha. Aerial: Use 100 to 150L of water/ha	Apply immediately damage occurs, preferably in the evening as a directed spray to thoroughly cover the base of the plants and the surrounding soil.
Cereals	Cereal Aphid, Rose Grain Aphid	20 to 40ml/ha in a minimum of 200L of water/ha	Apply at first sign of aphids. Apply the lower rate when aphid pressure is low and shorter residual activity is required. A 2nd application may be needed if aphids continue to migrate into the crop. Ensure sufficient water volume is used to give thorough crop penetration & coverage.
Citrus	Fullers Rose Weevil	300ml/100L as a directed trunk spray	Apply sufficient spray to form a complete band around the trunk from the base to 30cm high, using up to 300 ml/trunk. Apply at monthly intervals, using directed spray equipment. Commence prior to adult weevil emergence from ground and continue over duration of pest activity, usually December to June unless otherwise ascertained by monitoring. Ensure trees are well skirted up and tree rows are free of weeds to assist in control.
Field Tomatoes	Tomato Fruitworm	40ml/ha in a minimum of 1000L of water/ha	Apply at three week intervals from transplanting or thinning.
Forage & Horticultural Brassicas	Diamondback Moth, White Butterfly caterpillars	40ml/ha in a minimum of 700L of water/ha	Apply to seedbeds and following transplanting at two week intervals or as indicated by pest activity.
Grapes	Thrips	4ml/100L (DO NOT use less than 20 ml/ha)	Apply at early flowering. Apply in sufficient water to achieve good coverage of flower clusters.
	Bronze Beetle, Grass Grub Beetle	4ml/100L (DO NOT use less than 40 ml/ha)	Apply at dusk, when beetle flights begin. Apply in sufficient water to obtain coverage. Repeat after 14 days if flights are still continuing.
Onions	Onion Thrip	40ml/ha in a minimum of 500L of water/ha	Apply at first sighting of Onion Thrip and repeat as necessary.
Potatoes	Potato Tuber Moth	40ml/ha in a minimum of 500L of water/ha	Apply at first sighting of moths then at 2 week intervals. Maintain adequate soil moisture and soil cover over developing tubers to assist prevention of tuber mining.
White Clover seed crops	Blue-Green Aphid, Potato Mirid, Thrips	40ml/ha in a minimum of 200L of water/ha	Apply at first flower initiation, and repeat again 10 to 14 days later if required.
Amenity turf	Tasmanian grass grub, sod webworm, adult black beetle, red legged earth mite.	4ml/100L or 40ml/ha	Apply at first sign of pest infestation and repeat as necessary if pest activity continues. Good coverage is necessary to provide most effective level of control
Ornamentals	Aphids, caterpillars, thrips, bronze beetles, grass grub beetles, black beetles, weevils	4ml/100L water	Apply at first sign of pest infestation and repeat as necessary if pest activity continues. Good coverage is necessary to provide most effective level of control. Phytotoxicity – it is advised to pre-spray a selection of plants and observe for 7-10 days prior to treating large areas if local experience is unavailable.

**PUBLIC HEALTH SITUATIONS**

Domestic, Commercial, Public and Industrial premises e.g. Hospitals, Food processing plants, Outdoor surfaces

**PEST:** Ants, Carpet Beetles, Cockroaches, Fleas, Flies, Silverfish, Spiders, Woodlice

**RATE:** 20mL per 10L of water

**DIRECTIONS FOR USE:** When spraying, sufficient diluent should be applied to wet all surfaces or to give approximately 40 ml spray per square metre.

All surfaces frequented by pests should be sprayed including floors, walls and ceilings, with particular attention to areas where insects breed and hide such as cracks, crevices and warm areas surrounding equipment. Avoid spraying windows, highly polished surfaces or dark stained and painted surfaces, as visible spray deposits may remain upon drying.

When treating carpets it is advisable to brush the treated area (ie back side of a broom) once spray deposits have dried, to work product into the pile where adult fleas and nymphs reside.

Residual control up to 3 months may be achieved depending on the pest, the surface to be treated and the influence of climatic weathering. More regular treatment may be necessary where washing or rain removes insecticide residues and on alkaline surfaces such as plaster or unpainted surfaces.

**WITHHOLDING PERIODS:**

- Beans - 3 days,
- Citrus - Avoid contamination of fruit,
- Cereals (grain) - 70 days,
- Cereals (Barley and wheat forage) - 28 days,
- Field Tomatoes - 3 days,
- Forage Brassicas - DO NOT allow stock to graze within 14 days of last application,
- Grapes - DO NOT use after capfall,
- Maize, Sweetcorn - Seedlings only,
- Onions - 14 days,
- Potatoes -14 days,
- Vegetable Brassicas - 3 days,
- White Clover seed crops - DO NOT allow stock to graze within 70 days of last application.
- Amenity turf, ornamentals, do not re-enter treated areas until spray has dried.
- Public Health Situations: After **Cyhell**a has dried, usually 4-6hrs after application, aerate domestic dwellings before allowing re-entry of people & pets.

**GENERAL INFORMATION:** **Cyhell**a is a fast acting stomach and contact insecticide. **Cyhell**a is relatively stable to degradation in sunlight and hence gives extended control of insects on plant surfaces. It has short persistence in the soil. As **Cyhell**a is primarily a contact insecticide, thorough coverage of plants is important for optimum results.

**Pollinators:** When applied during non-foraging periods such as early morning or evening, application will not interfere with the activity of honey bees once the spray has dried, other than causing a short 2-3 day reduced foraging effect.

**TOXIC TO BEES.** Spray must not contact plants in flower if they are likely to be visited by bees.

**RESISTANCE MANAGEMENT:** Resistance to this insecticide could develop from excessive use. To minimise this risk use strictly in accordance with label instructions and resistance management strategies that exist for any insect pests listed on this label. Avoid using this insecticide exclusively all season, and avoid unnecessary spraying. Maintain good cultural control practices.

**MIXING:** Pour the measured quantity of **Cyhell**a into a partly filled tank and agitate the spray mixture while adding the remaining water. Maintain agitation during spraying. If applying **Cyhell**a in mixture, always add the **Cyhell**a last.

**NOTE:** Add Multifilm Extra™ spreader-sticker at label rates once the spray tank is nearly filled.

**APPLICATION:** **Cyhell**a may be applied through all conventional ground and aerial spray equipment, calibrated to ensure thorough coverage of the crop.

**COMPATIBILITY:** **Cyhell**a mixes readily with water and is compatible with commonly used fungicides except strong alkaline materials such as Bordeaux mixture and lime sulphur.
