™ Trademark of Tapuae Partnership, NZ.

Registered Pursuant to the ACVM Act 1997, No. P7088. See www.nzfsa.govt.nz/acvm/ for registration conditions

PLEASE READ ENTIRE LABEL BEFORE USE. SHAKE WELL BEFORE USE

ACTIVE INGREDIENT: Contains 375g/litre chlorothalonil and 50g/litre metalaxyl in the form of a suspension concentrate.

APPROVED HANDLER: This product must be under the control of an approved handler during use. See MSDS for full details.

RECORDS: Records of use must be kept under certain circumstances. See MSDS for full details.

DANGER: May be fatal if swallowed, inhaled or absorbed through the skin. This product is corrosive and may cause eye damage. May cause reproductive/ developmental damage and organ damage from repeated oral exposure at high doses.

WARNING: May cause skin irritation and sensitisation from prolonged skin contact. Suspected human carcinogen

FIRST AID: If swallowed DO NOT induce vomiting. For advice contact the National Poisons Centre 0800 POISON (0800 764 766) or a doctor immediately. If skin or hair contact occurs, remove contaminated clothing and flush skin and hair with running water. DO NOT scrub the skin. If splashed in eyes, wash out immediately with water for at least 15 minutes. If inhaled move the victim to fresh air immediately. Begin artificial respiration if breathing has stopped

PERSONAL PROTECTION: To prevent harm to human beings - A source of fresh, clean water for flushing eyes must be available in the treated area for seven days following application of **MAX CL** to plants. Workers must be informed, in a manner they can understand, that residues in the treated area may be highly irritating to their eyes. Care should be taken to keep the residue out of eyes (e.g. refrain from rubbing eyes). Instructions for use of a specialised eye wash facility must be available. Gloves should be worn at all times. Wear eye protection when handling the concentrate. Ensure adequate ventilation when handling concentrate. Remove protective clothing and wash hands and face thoroughly before meals and after work. Wash protective clothing daily after work. Do not eat, drink or smoke while using.

SHELF LIFE: When stored appropriately, this product should show no significant degradation for 2 years from the date of manufacture. Contact your supplier for further information about the use of any product that is older than this.

DISPOSAL: For containers 20 litres or less, triple rinse container and add residue to working tank. Dispose of container at an approved landfill or other approved facility. Avoid contamination of any water supply with product or empty container.

STORAGE: Store in original container, tightly closed, away from foodstuffs and under lock and key

ECOTOXIC: Very toxic to aquatic organisms, avoid contamination of any water supply with product or empty container. Toxic to soil environment and terrestrial invertebrates

MATERIAL SAFETY DATA SHEET: Additional information is listed in the MSDS available from Zelam Limited or www.zelam.com.

ERMA NEW ZEALAND: Additional information is available from the ERMA NZ website - www.ermanz.govt.nz. Approval Code: HSR000092.

CROP	DISEASES	RATE	DIRECTIONS FOR USE
BRAMBLES Blackberries, boysenberries, loganberries	Botrytis*, canespot, dryberry	400ml/100 litres water or 4 litres/ha	Apply at 14 day intervals from budburst to flowering. From tight cluster to early fruit formation apply at 10 day intervals. Autumn applications are necessary to protect primocanes from infection.
GRAPES	Blackspot, botrytis,* downy mildew, powdery mildew		Make a maximum of 3 applications at 14 day intervals when warm/wet conditions favour disease over the preflower to early fruit set growth stage.
TOMATOES	Botrytis*, early blight, late blight	4 litres in 500 - 750 litres of water/ha or 400ml/100 litres	Use as a foliar spray to run-off. Apply before disease appears and repeat at 10 - 14 day intervals. Use the closer interval when conditions favour disease or in the rapid growth period before flowering. Make a maximum of 3 applications per crop. Do not apply once flowering has finished.
ONIONS	Downy mildew	3.2 litres in 500-700 litres of water/ha	Make a maximum of 3 applications at 10 day intervals during active crop growth when temperature and high humidity favour disease development.

*BOTRYTIS: During periods of high risk use a specific botrytis fungicide.

WITHHOLDING PERIODS: Brambles and tomatoes - 14 days; Grapes - 28 days, onions - 14days.

RESISTANCE: Strains of fungus resistant to metalaxyl may develop resulting in a reduction in the efficacy of the product and thus in yield losses. To minimise the risk of resistance use strictly in accordance with label instructions.

MANDATORY DIRECTIONS: As **Max CI** contains minute quantities of HCB, a compound that can be taken up by grazing stock to give unacceptable residues in meat and milk, by law the following restrictions on the use of the product must be observed: DO NOT graze treated crops in the field. CULTIVATE areas thoroughly BEFORE ALLOWING ANIMALS TO ACCESS (i.e. not direct drilling or other minimum tillage techniques) and before sowing pasture or any animal feed crop. DO NOT feed any part of a treated crop to stock other than harvested mature bulb Onions.

COMPATIBILITY: **Max CI** is compatible with most commonly used pesticides except some highly alkaline materials such as Bordeaux mixtures or lime sulphur.

NOTICE TO BUYER: The manufacturers and vendors of **Max CI** warrant the formulation to contain the specified active ingredients within accepted tolerance when packed but make no warranty of any kind on the use of this material and accept no responsibility for results, whether the material has been used in accordance with directions or not.
